REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Claims 1-21 are examined. Of these claims 1, 11 & 12 are independent claims. They encompass (a) a method for making a polyester polymer comprising (i) adding talc having 20-300 ppm water, to a process for production of polyester polymer and (ii) forming the said polymer having specific range of coefficient of friction, (b) a method for making a concentrate using above ingredients and (c) a method for making polyester polymer using concentrate of (b).

Closest prior art is Hayashi et al (US 3968183) which discloses a film made out of a composition comprising polyester block copolymer and talc. In col. 8, lines 64-68, a composition containing a blend of two copolymers and silica is dried to obtain a water content of 0.005% by wt. (i.e. 50 ppm by wt). Though this teaching falls within the claimed range of water content, there is no hint or suggestion to predry the filler (as required by instant claims) before it is added to the polyester either during or after polymerization. Above claims are not prima facie obvious over prior art.

Claims 1-21 are therefore in condition for allowance.
